Why this Workshop ?

As AI technologies increasingly shape workplaces, governance, and everyday life, it becomes essential to critically examine both their promise and their risks. This workshop is designed to bridge the gap between technology and law by equipping participants with practical knowledge of AI's foundations, its impact on labour rights and workplace bias, and the legal safeguards available to protect privacy and dignity in the digital age. By combining global perspectives with India's evolving regulatory framework, and through case studies, interactive discussions, and expert insights, the program prepares educators, students, and professionals to engage meaningfully with AI and contribute to building ethical, rights-based digital futures.

WHO CAN ATTEND?

The workshop is open to faculty, researchers, and students from law, technology, and social sciences, as well as legal professionals, policymakers, industry experts, IT innovators, NGOs, and activists interested in exploring AI's impact on labour rights, privacy, and human rights.
